

Immingham Retail Complex

Nineteen trees have been planted at a new Tesco store development in Immingham, Lincolnshire utilising Green-tree's Amenity Tree Soil. The trees were installed in the hard landscaped car park area, incorporating tree grilles and guards. Over 175 tonnes of Green-tree Amenity Tree Soil was supplied to the site at Immingham providing a reliable and consistent source of growing media for the newly planted trees. Renowned for its ability to retain a tree's natural rooting structure in hard landscaped areas. The structure and nature of Green-tree Amenity Tree Soil ensures water and oxygen are supplied freely to the tree's root system and also aids drainage for trees in hard landscaped areas.

Justin Paxman, Landscape Contractor commented:

"Green-tree Amenity Tree Soil was used on this project to provide structural support for the tree's roots in a hard landscaped area that will be highly trafficked. The soil was delivered as required and was of a consistent high quality from the beginning of the project to the end. It is easy to work with on site and the finished results are excellent."
